Mining Works and Services

✓ Profile

TSS-Underground is the mining and construction section of Waste & Water Sarl, a company specialized in mining, construction and environmental works and services.

The company operates as mining contractor in various locations and has a significant experience, in mining and tunneling.

TSS-Underground operates in European bauxite and magnesite mines and has rental equipment available for operations worldwide

✓ TSS-Underground provides:

Mining Services

Exploration / Core Drilling

Rental Equipment

Full Scanning Services

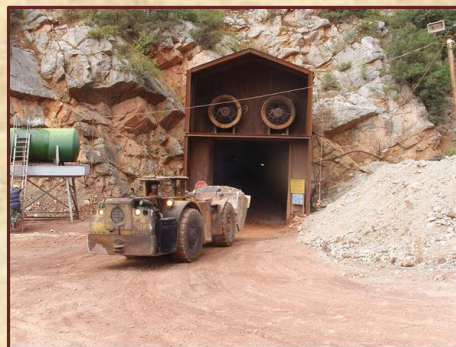

Engineering & Consulting

Commodities Trade

✓ Mining Services

TSS-Underground offers a wide variety of mining services such as:

- Drilling
- Blasting
- Loading
- Scaling
- Roof Bolting
- Frame Support
- Pumping
- Ventilation
- Electricity Works
- Prospecting

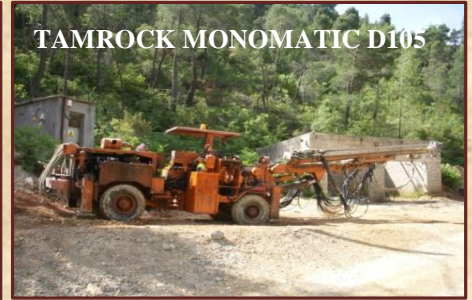

And generally all services needed for a successful underground operation. The above services are provided separately or as turnkey projects depending on customer needs.

✓Rental Equipment

TSS-Underground offers a wide variety of rental equipment such as, Jumbo Drills, Roof Bolters, Scalers, Access Baskets, Scooptrams, Underground trucks, Air-compressors, Generators and other material.

All machinery is available for worldwide operations with or without operator.

✓Engineering & Consulting.

TSS-Underground provides complete engineering support, design & consultancy services regarding any technical problem. Mining Evaluation services and due drilling from specialized technical personnel are also available.

Environmental assessment & remediation studies are also provided on disturbed landscapes. We listen to your problem and provide the best possible solution, irrespective of your projects size.

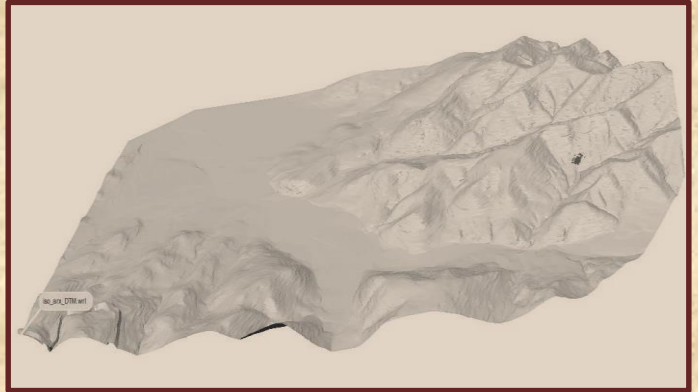

✓Exploration / Core drilling

Core drills are used frequently from TSS in mineral exploration where the coring may be several hundred feet in length. The core samples are recovered and examined by specialized technical personnel for mineral percentages and stratigraphic contact points. This gives as the necessary information to begin or abandon mining operations in a particular area.

✓ Full Scanning Services

TSS-Underground also provides complete full scanning (underground mapping) and software services about underground projects. Using special equipment we have the opportunity to scan a complete 360 degree sphere from a single position. The scan data can be corrected to a 3D XYZ point cloud created an 3D image of the underground project.

✓ Commodities Trade

Extracted minerals are available in sale.
